

LSCA Silt Removal Process

LSCA Members;

As you are aware, the lake will be lowered 8 feet this Fall to allow for the removal of silt buildup in several key areas around the lake. This is the perfect time for lake residence to also address their own silt issues. Here are the instructions from the US Army Corps of Engineers (ACOE) & Lake Spivey Civic Association (LSCA)

1. If you are planning to remove silt, provide the dredging area to Brent Benedetti at lakemanager@lakespivey.org. Google Earth (example below) is an easy way to submit your dredging area. Use the polygon tool to define the removal area. Once the area is defined, it will calculate the acreage. If you have questions, call Brent at 404-392-9800.

When performing silt removal or sea wall repairs, the Army Corp of Engineers (ACOE) does not require permitting for less than 1/10 acre of land disturbed. LSCA as the lake owner will still have to notify ACOE of these smaller homeowner projects.

2. Residence are responsible for selecting their own contractor to complete the work and remove their own silt spoils from their project.
3. The Lake will begin being lowered on September 9, 2018. LSCA's goal is to close the spillway outlet valve by January 1, 2018. We will close the drain valve no later than March 1, 2019.

Thank you,

Brent Benedetti
